

TELEMETRY is set to revolutionize the security landscape of IoT devices and systems.

By developing cutting-edge tools and methodologies, TELEMETRY aims to identify and mitigate vulnerabilities in complex systems from various industrial sectors, such as telecom, aerospace, and manufacturing. Our approach ensures resilient and secure digital infrastructures through continuous risk assessment and real-time anomaly detection.

Our expectations:

We envision our tools enhancing cybersecurity across various industries, benefiting businesses and citizens alike. By collaborating with experts, we are shaping a safer IoT landscape for the future.

What we do:

We create and validate innovative tools to detect security vulnerabilities in IoT environments. Our solutions, tested in real-world pilots, improve threat detection accuracy and reduce the cost of verification.

Our aim:

TELEMETRY focuses on building resilient IoT infrastructures. We aim to protect systems throughout their lifecycle—from design to operation—by providing reliable tools for vulnerability detection and secure updates.
